

What is DataPort

- DataPort is an Enterprise Application Integration (EAI), Enterprise Service Bus and/or a Business Process Orchestration platform available on the cloud. It provides several features that can render it all of the following:
 - An Application Server.
 - An Integration hub.
 - A Process Server.
 - A REST service framework.
 - Identity Management server.
 - Message Oriented Middle-ware (MOM).

- And can be very easily used for:
 - Creating new software applications.
 - Service Oriented Architecture (SOA).
 - Integrating existing and/or new applications.
 - B2B Integration. (with content base routing, integration point monitoring and fail-over support)
 - Data format conversion, SQL result set to XML, to JSON etc.
 - Extract Transform Load (ETL)
 - Data-ware housing
 - Single sign on.
